

ONE FILM. TWO WORKFLOWS.

Traditional filmmaking mapped to the AI Filmmaking process.
Same creative stages. Different production tools. A director guides every decision.

TRADITIONAL

LIVE-ACTION PRODUCTION / EXAMPLE TOOLS

- 01

Write the story
Develop the premise, characters, screenplay and a clear sequence of events.
↓
TOOLS Final Draft / WriterDuet
- 02

Define the look
Set the lighting, lenses, framing and palette. Build a lookbook and test the image.
↓
TOOLS ShotDeck / camera and lens tests
- 03

Cast and costume
Cast performers and test wardrobe, hair and makeup for consistent appearances.
↓
TOOLS Casting platforms / wardrobe / camera tests
- 04

Build the world
Scout locations, dress the set and source vehicles, props and practical details.
↓
TOOLS Location camera / SketchUp / practical sets
- 05

Plan the coverage
Break down scenes, budget and schedule. Storyboard camera moves; rehearse scenes.
↓
TOOLS Movie Magic / Shot Designer / storyboards
- 06

Shoot the scenes
Direct the cast and crew; capture performance, planned coverage and location sound.
↓
TOOLS Cinema camera / gimbal or dolly / field recorder
- 07

Review and reshoot
Review dailies for performance and continuity. Shoot retakes, pickups and missing inserts.
↓
TOOLS DaVinci Resolve / Frame.io / camera crew
- 08

Build the edit
Organize footage, sync production audio, select takes and shape the pace of the story.
↓
TOOLS DaVinci Resolve / Premiere Pro
- 09

Design the sound
Edit dialogue, record Foley, layer effects and compose music to support the action.
↓
TOOLS Pro Tools / Fairlight / Foley recording
- 10

Finish and verify
Complete VFX, grade color and mix sound. Check continuity, sync and delivery settings.
↓
TOOLS Resolve / Fusion / reference monitor
- 11

Deliver and archive
Export the final master and viewing copies. Back up the project and original media.
TOOLS Resolve / Media Encoder / backup drives

AI FILMMAKING

CURRENT WORKFLOW / EXAMPLE TOOLS

- 01

Write and prompt
Develop the story, characters and script. Translate creative intent into clear prompts.
↓
TOOLS ChatGPT
- 02

Anchor the look
Approve visual references for light and color. Set the aspect ratio (e.g., 21:9) before generating.
↓
TOOLS ChatGPT Images
- 03

Approve character identity
Build multi-angle character and expression refs. Approve wardrobe, proportions and textures.
↓
TOOLS ChatGPT Images
- 04

Reference the world
Create location, prop and environment references. Keep spatial layout and design consistent.
↓
TOOLS ChatGPT Images / reference library
- 05

Plan the generations
Divide scenes into shots with timing, blocking, camera movement and continuity cues.
↓
TOOLS ChatGPT
- 06

Generate and extend
Generate shots from prompts and approved refs. Extend selected shots where continuity calls for it.
↓
TOOLS Runway / Seedance 2.5
- 07

Review and regenerate
Review performance, likeness and continuity. Refine prompts; regenerate shots and inserts.
↓
TOOLS ChatGPT / Runway / Seedance 2.5
- 08

Download and assemble
Organize and compare generated takes. Sync audio and edit for story, rhythm and coverage.
↓
TOOLS DaVinci Resolve / Premiere Pro
- 09

Shape the soundtrack
Edit dialogue, effects and ambience; preserve sync. Generate or source music, then shape the mix.
↓
TOOLS Resolve Fairlight / Suno (optional score)
- 10

Match and verify
Match color and continuity; correct visual artifacts. Verify framing, audio sync and delivery settings.
↓
TOOLS DaVinci Resolve / Fusion
- 11

Export and archive
Export masters and viewing copies. Back up source media, prompts, references and project files.
TOOLS DaVinci Resolve / local or cloud storage

THE REVIEW LOOP
Review > refine > reshoot | regenerate > approve

Both workflows iterate; stages often overlap. Tools shown are representative.
